

“Manufacturing Center
of Excellence”

Organization and Discipline: by means of 5S

5S is a foundational step which plays a major role in stabilizing process and sustaining gains realized through improvement activities.

5S is about organization and discipline and goes beyond cleanliness to help deliver consistent operational results in a safe and orderly workplace. 5S has been widely used in all types of organizations, from manufacturing and service to health care; from military and government to financial institutions.

Workshop Description

The 5S workshop goes beyond just an educational experience.

Once the 5S training is provided the team will execute a hands-on implementation

What You Will Discover

This course has been designed to introduce you to the 5S methodology and help you learn basic implementation steps including evaluation and audit.

- Introduction to the House of Lean
- What is 5S?
- What are “red tags”?
- What are the “Common Color Codes”?
- How do you conduct a 5S Audit?
- How do you monitor progress?

How You Will Benefit

Participants successfully completing this course will gain the knowledge required to:

- Understand the purpose behind each of the 5-steps and the criteria to evaluate how well each “S” has been implemented
- Conduct a 5S Audit
- Implement a 5S progress measurement program
- Start using this technique right away in your organization with the structured format learned
- Understand how the 5S system will help you correctly apply the lean techniques through making waste visible and supporting standardized work requirements

Who should attend?

- Lean / change agents, managers and supervisors who want to make sure they are starting this foundational concept the right way or interested in improving the current program.
- Organizations considering a Lean approach or those in the beginning stages (to set the stage for further 5S improvements).
